

4<sup>th</sup> December, 2014

Mr Heath Nankervis  
Impact Digital  
306 Albert St  
Brunswick  
VIC 3056

Dear Heath,

Carbon Coach is pleased to confirm our completion of your carbon footprint assessment for 2013-14. **Total company emissions for the 2013-14 financial year came to 711 tonnes of Carbon Dioxide Equivalent Emissions (CO<sub>2</sub>-e-), a 10% reduction on the previous year.**

**Since your baseline emissions calculation in 2011-12, Impact Digital has reduced its emissions per unit of paper by 36%.**

The reduction is achieved through a further strong shift toward carbon neutral paper sources, and a more than 10% reduction in electricity consumption in spite of increased volume. With approximately 80% of your paper now coming from Carbon Neutral sources there is still some room for further emissions reduction here, but perhaps without as large an impact on your total emissions as in previous years. The improvement in your electrical energy efficiency per unit of production is also highly praiseworthy.

This assessment is in accordance with the The Greenhouse Gas Protocol: Corporate Accounting and Reporting Standard of 2004 and accordingly represents a complete and thorough assessment of the emissions within the nominated organisation boundary.

As there were no major changes to the scale and scope of Impact Digital's operations, data was not collected for emission sources previously found to have no or negligible contribution to the emissions total. We have added one further emission source to this year's assessment, your use of Imaging Oil. This did not materially affect the total emissions outcome and so we have not re-stated your baseline emissions.

Congratulations on completing your carbon footprint for 2013-14 and also on the large emissions reduction.

Thankyou for choosing Carbon Coach to assist you in this endeavour. We trust you found our support highly valuable look forward to assisting you again next year.

Yours sincerely,

**John Downie**  
*Principal Consultant*
